Simplifying Enterprise Desktop Computing

As new age corporates are constantly on the move, enterprise computing is becoming mobile. Work applications are accessible from any time, anywhere with BYOD(Bring Your Own Device). Enterprises are encouraging BYOD to increase productivity and reduce costs but, at the same time do not want to compromise on the security.

Join us to discuss & explore Future trends of Enterprise Desktop Computing on 1st June, 6:00 PM at The Residency Towers, Coimbatore.
