

Is your infrastructure ready to handle the amount of data that your organization is generating?

Dear Sir/Madam,

The business intelligence and analytics market landscape has changed and corporate entities and lines of business call for simple yet powerful systems. As a result, both software providers and practitioners are driven to adopt simpler yet robust approaches to address these emerging needs.

MiraFra has responded to these market needs applying core analytics power combined with practicality, agility, and the conciseness needed to give CIOs like you a robust solution. Cognos Analytics and SPSS Predictive Analytics aims to solve complex problems with a modern, practical, easy and self-service approach.

- Move towards Cognitive Computing Without Sacrificing Performance
- Gain deeper understanding of your Business and greater intuition in creating reports, dashboards, and visualizations of information
- Integrate predictive intelligence with business rules and optimize operational decisions
- Use Predictive Analytics for structured and unstructured data from any source
- Apply Statistical analysis, data mining, real-time scoring and decision management to your business needs

Learn more about how IBM Cognos analytics and SPSS Predictive analytics can change the way your business looks at Data.
